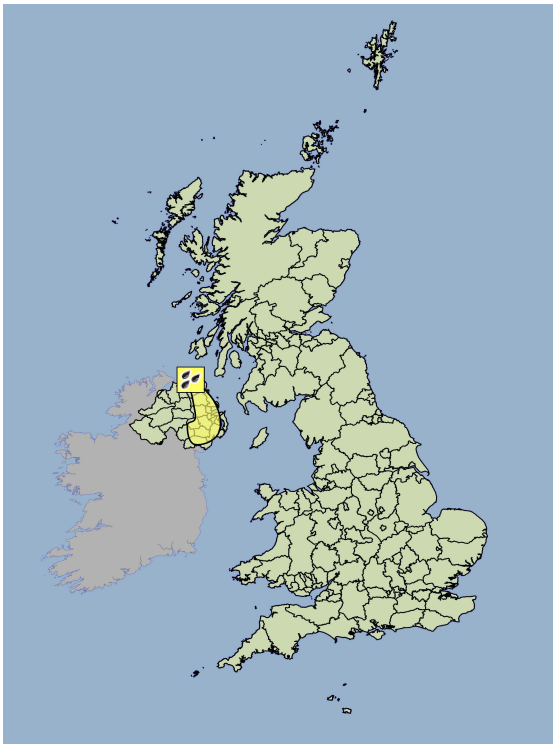
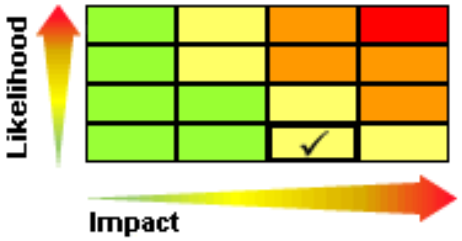
National Severe Weather Warning Service





Chief Forecasters Assessment
A slack and unstable airmass covers much of Northern Ireland. As a result, slow-moving showers may develop in response to daytime heating giving the risk of some localised impacts, with over 10 mm of rain possible in an hour and 20 mm in a two or three-hour period.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **12:00 on Tue, 08th Jul 2014** until **18:00 on Tue, 08th Jul 2014**

Slow-moving heavy showers are likely to develop from late this morning onwards across the eastern side of Northern Ireland but will tend to decay later this afternoon.

The public should be aware of possible surface water flooding, although, as is often the case in such situations, many places will escape the heaviest downpours.
